# 1. CARACTERISTIQUES TECHNIQUES

Displayed parameters:	Measurement values mg / % - Configuration Menu - Temperature value
Display:	Back lighted - 2 lines of 16 alphanumeric characters; 9.2 mm high
Indication:	LED alarms status
Configuration:	8 push buttons keyboard on front face - Keyword protected
Scales:	0 to 5 mg/L (5 ppm)
Accuracy:	± 0.3% full scale (5 ppm)
Temperature:	Input for a 3 wires Pt 100 Ω /0 °C; accuracy ± 0.3 °C
Relay outputs:	4 closing contacts (Silver alloy), voltage free
Thresholds:	3 programmable independent thresholds - with adjustable hysteresis 0...100% and adjustable timer from 0 to 9999 s
Output relay (S4)	Common alarm signal for: <ul style="list-style-type: none"> <li>- Too long injection</li> <li>- Temperature out of range:</li> <li>- Over range, open loop</li> <li>- Pt 100 Ω dysfunction</li> </ul>
Contact:	Initial resistance 100 mΩ as a maximum (voltage drop 6 V DC 1 A) Rated at 831 V AC / 3 A / 277 V AC; 90 W / 3 A / 30 V DC Switching capacity (minimum) 100 mA, 5 V DC (depending of switching frequency, ambient conditions, accuracy) Mechanical life time (minimum) 5 x10 <sup>6</sup> operations (180 commutation/min) Electrical life time (minimum) 2 x10 <sup>5</sup> (20 comm./min) [3 A, 125 V AC], [3 A, 30 V DC] and 10 <sup>5</sup> (evaluated charge) for 3 A, 125 V AC
Output relay alarm	Too long injection, adjustable timer from 0 to 9999 s
ON/OFF Regulation:	Pulse time 0...9999 s - High and low proportional bandwidth, high and low dead zone.
PID Regulation:	Proportionality 0...200%, - Integrant and Derivative: 0...999 s
Calibration sequence:	Regulation on standby, relay outputs inhibited, analogical outputs stand on last values
Measurement output:	0/4-20 mA (maxi 600 Ω) proportional to measurement, galvanic insulated
Temperature output / PID:	0/4-20 mA (max 600 Ω), scaling 0...100 °C, galvanic insulated
Program Testing:	simulation through the menu on measurement, temperature, PID and relays outputs
Main power supply:	230 V AC / 50-60 Hz (other on request) - Consumption 10 VA
Models:	Panel mounting, IP65, 72 x 144 mm, connections on screw terminal IP40 Idem DIN Rail mounting, only for blind monitor Wall mounting, IP65, cable glands, connections on screw terminal

## OPTION (RS 422 + Logger)

Communication:	RS422 output, J-BUS link, binary slave mode, 2400 to 9600 baud
Data Logger:	Cycle average measurement record, with a programmable period, 150000 records maxi on MMC (Multi media card) / External driver necessary for reading

# 2. DIMENSIONS

**Extension terminal:**  
identical to the panel or wall mounting

Panel mounting instrument

Wall mounting instrument

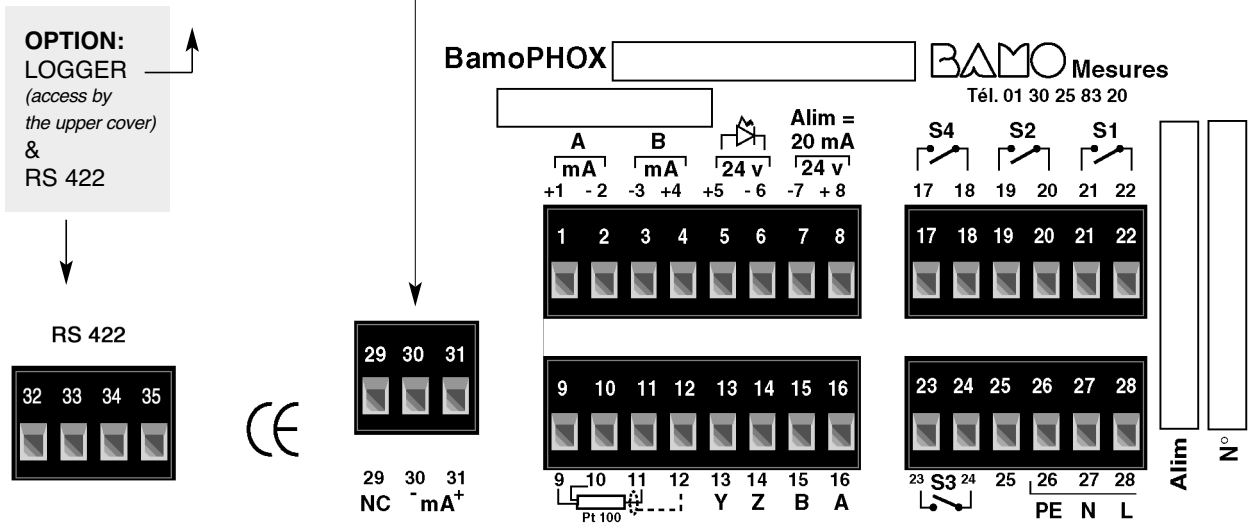

### 3. WIRING

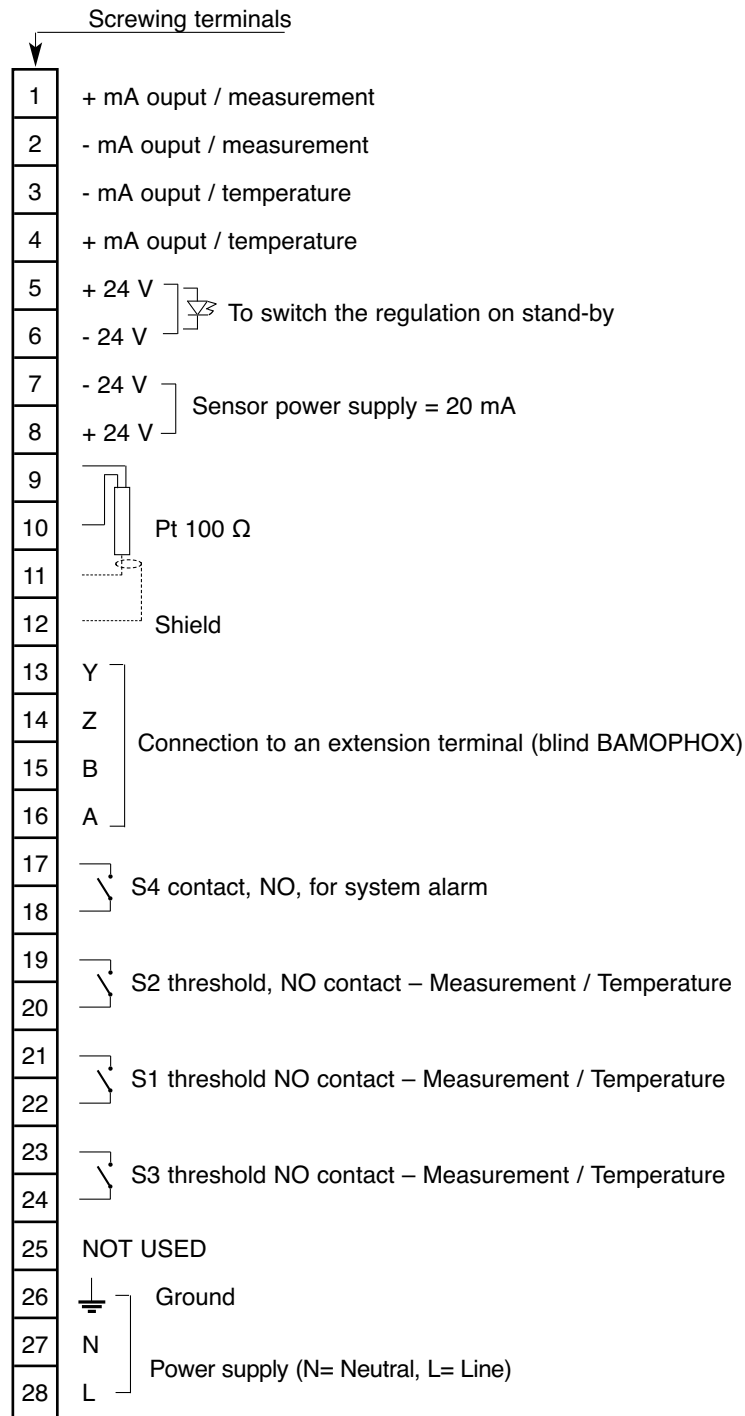

#### PANEL MOUNTING

Measurement input

#### WALL MOUNTING

**Wiring from wall or panel mounting BAMOPHOX to an Extension terminal BAMOPHOX**

- Maximum length cable  
500 m

- Wire specifications:  
Mains cable or 4 wires shielded cable  
≥ 0,25 mm<sup>2</sup> cross section

## 4. FRONT PANEL

### S1, S2, S3, and S4

indicate relays status:

LED lighting = contact ON  
 LED OFF = contact OFF  
 LED flashing = Timer in use

2 lines /16 alphanumeric characters  
 9.22 mm high - Back lighted

### Key "A"

To display the parameters of upper line.  
 (main BAMOPHOX)

### Key "B"

To display the parameters of lower line.  
 (Extension blind BAMOPHOX)

### "VALID" key

To save the parameters on EPROM  
 when it asks:

### VALIDATION ?

Caution, when you press this key,  
 all parameters are saved.  
 (previous data programming  
 will be overwritten).

If you are not sure of any modification,  
 do not press the VALID key,

To change parameters of data capture:

Numeric input increase the  
 flashing digit (loop 0 after 9).

Reverse the choice Yes / No,  
 Up/Down, 0-20 mA / 4-20 mA etc.

To go to the next display or to change a value.

### "ENTER" key

To change the step displayed menu.  
 At the last step, it comes back to the  
 first line.

### "MENU -" key

To move the cursor during configuration.  
 At the last digit, comes back on the first one.

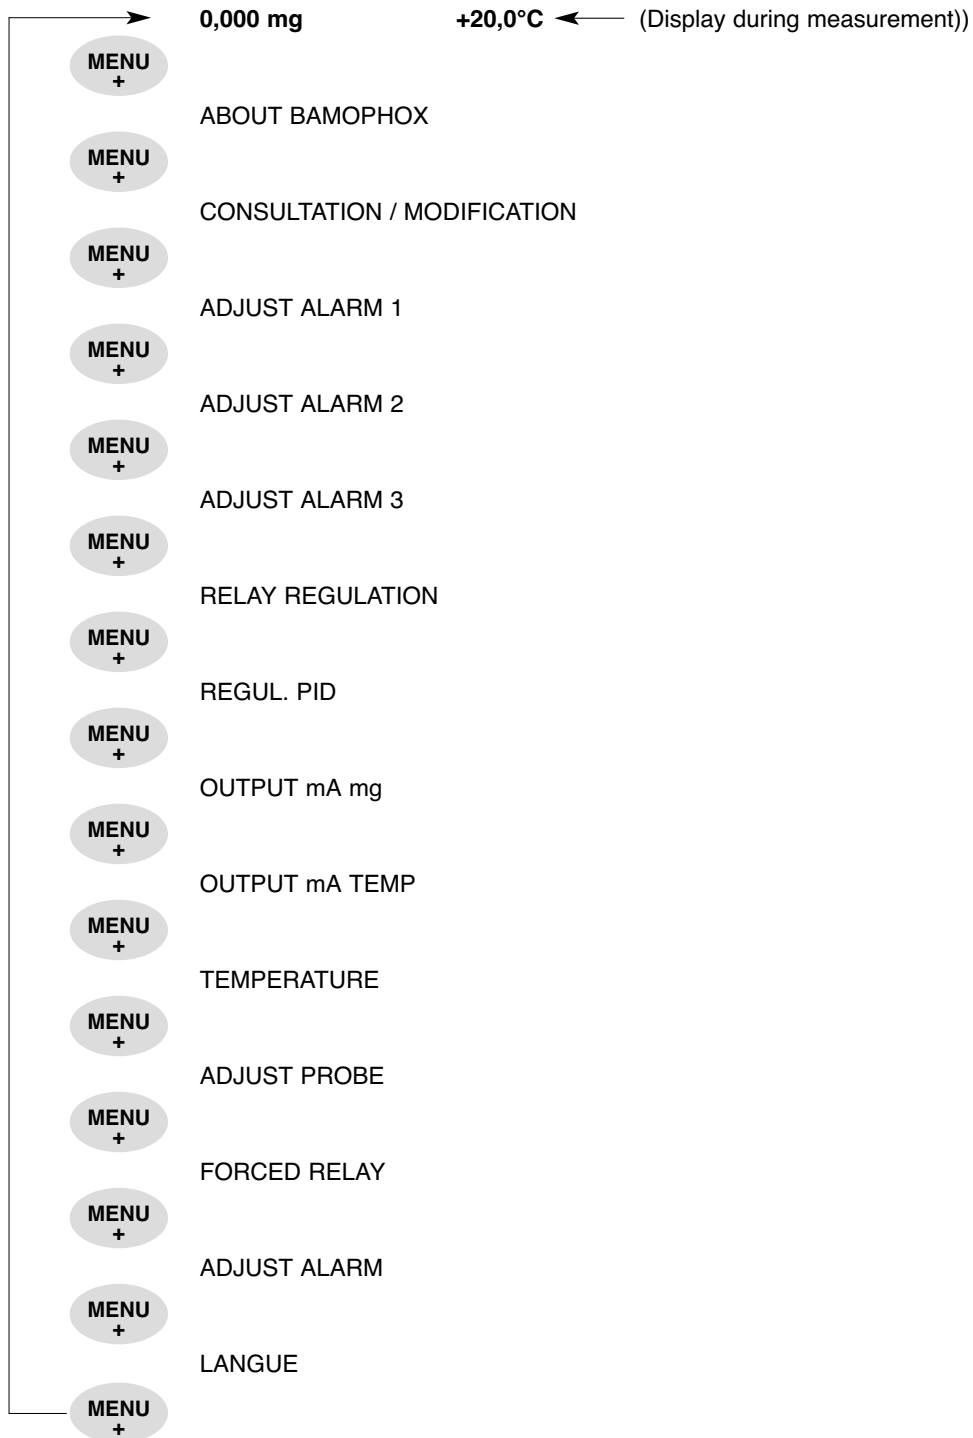

### "MENU +" key

To go to the next menu.

Pushing simultaneously both keys

"MENU +" and "ENTER"  
 allows a fast return to measurement display.

## CONSULTATION / MODIFICATION

CONSULTATION

▲

MODIFICATION

ENTER

CODE ? 0000

▲

▶

ENTER

CODE ? 5105

ENTER

TIME : 30 mn

MENU  
+

Last 4 digits (of serial number) are the key code to access the MODIFICATION menu.

When wrong code is entered, a message "ERROR" appears during 3 seconds.

After 30 minutes, the display returns automatically to the measurement mode.

**From this mode MODIFICATION it is easy to return back to measurement for testing the relay outputs and regulation mode.**

Once in modification mode, reach measurement display and press ENTER

ENTER

FORCED MEASURE

ENTER

00,00 mg 00°C

▲

▶

(one digit is flashing) Modify the value. Immediately the instrument acts within the configuration (thresholds, regulation, analog outputs ...).

**When PID regulation is activated, the display shows the PID %**

ENTER

FORCED PID

ENTER

00,00 mg 00°C

▲

▶

(one digit is flashing) Modify the value. Immediately the instrument acts within the configuration.

To test the analog output (mA) on PID mode: the PID should be active and in MANUAL mode.

ENTER

Press ENTER to cancel the test mode and to go back to the measurement mode.

## ADJUST ALARM 1

MENU  
+

ADJUST ALARM 2

ENTER

ALARM 1 ON/OFF

ENTER

ALARM 1 MEASURE/TEMP

**MEASURE**= Threshold against pH/mV measured value  
**TEMP.**= Threshold against temperature measured value

ENTER

ALARM 1 LOW/HIGH

**HIGH**= Contact closes when value goes over the limit  
**LOW**= Contact closes when the value goes under the limit

ENTER

ON 0,000 mg / °C

To close the contact S1 at this value

ENTER

OFF 0,000 mg / °C

To open the contact S1 at this value

ENTER

DELAY UP ON/OFF

Delay (or no delay) before to close the contact S1

ENTER

TIME 0000 SEC

Delay time to close the contact S1

ENTER

To open the contact S3 at this value

Delay (or no delay) before to close the contact S3

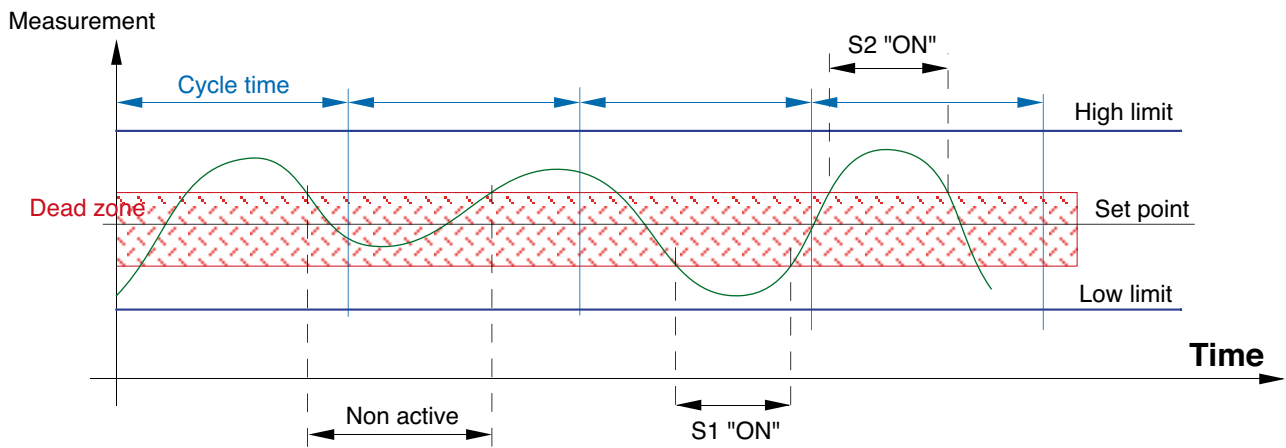

Delay time to close the contact S3

Delay (or no delay) before to open the contact S3

Delay time to open the contact S3

## Example

With process configuration:

- Set point: 0,500 mg
- High dead zone: 0,050 mg that is between 0,500 and 0,550 mg
- Low dead zone : 0,050 mg that is between 0,450 and 0,500 mg
- High BANDWIDTH: 0,400 mg (Limit of 0,900 mg as a maximal limit)
- Low BANDWIDTH: 0,400 mg (Limit of 0,100 mg as a minimal limit)

- Over the highest limit (from 0,9 to 2,0 mg), S2 is "ON": permanent injection
- Under the lowest limit (from 0 to 0,1 mg), S1 is "ON": permanent injection
- Inside the dead zone (from 0,45 to 0,55 mg), S1 and S2 are "OFF"
- If the measurement value is between the dead zone and the highest limit (from 0,55 to 0,90 mg) or between the dead zone and the lowest limit (from 0,10 to 0,45 mg), the contact S1 or/and S2 are "ON" only for a time proportional to the step between measurement and set point.

$$\text{Closing contact time} = \frac{\text{Cycle time} \times (\text{Measurement} - \text{Set point})}{\text{Proportional BANDWIDTH (high or low)}}$$

**Caution:** The minimum closing time of a relay is 1 second

If the measurement  $M=0,680$  when the cycle time is 10 second, the closing contact time is:

$$\frac{10 \times (0,68 - 0,50)}{0,400} = 4,5 = 5 \text{ s}$$

## REGUL PID

MENU  
+

Output mA free chlorine → Please see page 15

**This operating mode allows a PID regulation with an analogic output 0/20 or 4/20 mA**

ENTER	REGUL ON/OFF	▲		To switch ON or OFF the regulation mode
ENTER	REGUL AUTO/MANU	▲		MANU=MANUAL to be able to check the relays output
ENTER	SET VAL 0,000 mg	▲	▶	Set point value
ENTER	GAIN : 0,000	▲	▶	Gain setup (see also ADJUST PID PARAMETERS)
ENTER	T.i : 0050 Sec	▲	▲	Integrant setup
ENTER	Td : 0012 Sec	▲	▶	Derivative setup
ENTER	ACTION: DIRECT/REVERSE	▲		
VALID	OUTPUT 4/20 mA / 0/20 mA	▲		
	SAVING ?			

**To switch the PID regulation on stand-by, please input 24 V= 20 mA on terminals 5(+) and 6(-).**

### ADJUST PID PARAMETERS

In order to determinate the setup values for PID regulation, we recommend to use the Ziegler-Nichols open loop method

#### Proceed as following:

- Connect a recorder to the analogic measurement output or write the reading measurement values for then to draw the graph  $f_{(time)}$
- Switch on the PID regulation in MANUAL mode
- Reach to and keep close the measurement value to the set point, adjusting the PID output
- Apply on  $\Delta Cde$  a step of 10 % (for instance) on the analogic output (Cde).

**Example:** if the value is 30%, apply 40%

- Note on the graph the corresponding timing.
- Determinate on this graph both  $t$  and  $T$ :
  - $t$  = delay of response
  - $T$  = Time corresponding to the same variation in % of measurement ( $\Delta m$ ) and the analogic output ( $\Delta Cde$ ),  $\Delta m = \Delta Cde$ .This value may be found out on the slope.
- Modify the PID parameters as following:

Regulation	Gain	Ti(s)	Td(s)
PID	$1,2 \times T/t$	$2 \times t$	$0,5 \times t$
PI	$0,9 \times T/t$	$3,3 \times t$	0
P	$T/t$	9999	0

Output mA Free chlorine

MENU +

Output mA TEMP.

Measurement signal copy on the analog output

ENTER

HIGHER 0000 mg

Value corresponding to 20,00 mA

ENTER

LOWER 0000 mg

Value corresponding to 00,00 or 04,00 mA

ENTER

OUTPUT 4/20 mA / 0/20 mA

Output type

ENTER

SAVING ?

VALID

Output mA TEMP.

MENU +

TEMPERATURE

Caution: If PID regulation is active, this step menu would not appears

ENTER

HIGHER 0000 °C

Value corresponding to 20,00 mA

ENTER

LOWER 0000 °C

Value corresponding to 00,00 or 04,00 mA

ENTER

OUTPUT 4/20 mA / 0/20 mA

Output type

ENTER

SAVING ?

VALID

To switch on stand by the PID connect 24 V= 20 mA on terminals 5(+) and 6(-)

TEMPERATURE

MENU +

→ Please see page 16

ENTER

MEASURE : AUTO / MANUAL

AUTO: A Pt 100 probe should be connected

MANUAL: Without Pt 100 probe  
Manually entered temperature value

ENTER

FLUIDE T. + 000,0 °C

(MANUAL mode)

ENTER

SAVING ?

VALID

**Caution: Set up the instrument on MODIFICATION mode (page 8)**  
**During the standardization the measurement value is on standby, until the measurement mode is recalled, plus a timing adjustable in "DELAY" (hereunder).**

This allows a comfortable operation with a reset of the process.

**ENTER**

ZERO YES/NO

**NO:** Send directly to the menu "SLOPE" (see below)  
**Si non, affichage de ETAL. PENTE**

**ENTER**

SOL ZERO 0 mg

Let flows the 0 chlorine water  
 (through the active charcoal filter).

**ENTER**

ASY 0,342 mg

Wait at least 5 minutes for zero stabilization

**ENTER**

SLOPE YES/NO

If the measured value at "0 mg" is still too high,  
 an **ERROR** message appears.  
 Check the filter and if the cell is not too dirty.

When the ZERO measurement is done or if you did not choose  
 to calibrate it, you may calibrate the slope.

**ENTER**

SAMPLE 0,000 mg

Let flows the sample water; measure the chlorine concentration  
 with the chlorometer; note the value.

Enter here this value corresponding to the sample.

Closer to the instrument full scale value, better is the accuracy.

**ENTER**

SLOPE xxx,x %

Display of the instrument GAIN

**CAUTION: If the SLOPE is >150% or <50%  
 DO NOT SAVE**

Check the filter and the dirtiest of the cell.

If the SLOPE is correct, please proceed to a second calibration to  
 confirm the value.

**ENTER**

DELAY 0000 Sec

**ENTER**
